

NOTES:

- REINFORCING STEEL CAGE IS TO BE PRE-FABRICATED AND BROUGHT TO THE SITE IN GOOD CONDITION AND PLACED PRIOR TO CONCRETE POURING.
- 2. REINFORCING BARS ARE NOT REQUIRED TO BE EPOXY COATED (UNLESS OTHERWISE SPECIFIED)
- 3. INTERNAL VIBRATION BY MECHANICAL METHOD (CSA STANDARD A 23.1) IS TO BE USED TO CONSOLIDATE FRESH CONCRETE. INSERTION TIME SHOULD BE BETWEEN 5-10 SECONDS PER LIFT OF CONCRETE POURED. LIFT THICKNESS SHOULD BE ENOUGH TO ENSURE THE VIBRATOR CAN REACH EACH LIFT AND INTO THE PREVIOUS LIFT (MINIMUM 3 LIFTS.)
