Principal Geoscientist

EXECUTIVE SUMMARY

EON Environmental Consulting Ltd. was retained by City Park Homes (Streetsville) Inc. to conduct a Phase One Environmental Site Assessment (ESA) of the property located at 6, 10, and 12 Queen Street South, 16 James Street, 0 and 2 William Street, Mississauga, ON. The objectives of the Phase One ESA were an investigation of the subject property and adjacent lands conducted in accordance with CSA Z768-01, O. Reg. 511/09 and O. Reg. 153/04 as amended, and under the supervision of a Qualified Person in order to determine the likelihood that one or more contaminants may have affected any land and/or water on, in or under the property.

Potentially Contaminating Activities (PCAs), and contaminants or materials of potential concern, if revealed on-site, or at properties located within a 250 m radius of the site, were evaluated as to whether they generated 'Areas of Potential Environmental Concern' (APECs) on-site. PCAs are itemized in Schedule D Table 2 of O. Reg 511/09. APECs, if identified, were individually evaluated whether they were triggers for additional investigation via a Phase Two ESA.

PHASE ONE ESA SCOPE OF INVESTIGATION

The Phase One ESA scope of investigation included review of historical background information via examination of:

- Previous Phase One and Two reports;
- Fire Insurance Plans;
- Vernon's Street Directory;
- Environmental Risk Information System (EcoLog ERIS);
- Mapping resources including: Mississauga Navigator Thematic, Google Earth, MNR Heritage Area, Topographic Maps, Quaternary, Bedrock and Geology;
- Aerial photographs; and
- Water well records from Ontario Oil, Gas & Salt Resources Library & MECP.

A site reconnaissance was completed to observe site grounds and adjacent properties in order to identify PCAs and APECs. This information was utilized to formulate a preliminary Conceptual Site Model regarding potential contaminants, contaminant migration pathways, and human and/or ecological receptors at the site.

SITE DESCRIPTION

The study site is located approximately 530 m southwest and 390m west of Credit River in the City of Mississauga. The site is currently vacant with all previous building structures demolished between 2021 and 2023. A fresh concrete slab was noted at 12 Queen Street South.

- **6, 10 & 12 Queen Street** were historically residential from 1950s to 2021. 6 Queen Street was residential from 1950s to 2010s, then transformed to a commercial office until 2021. All three (3) buildings were demolished in 2021.
- **2 William Street** was historically utilized for commercial trucking, then parking for school buses then vacant in 2022.
- **16 James Street** was most recently utilized for commercial purposes, with various garages and commercial fuel sales occupying the former on-site building with the tanks west and north west of the building. Historically the site operated as “SASH factory”, a wood building facility.
- **0 William Street** was a dead-end portion of a road way historically utilized for storage of cars or aboveground storage tanks.

The study site occupies approximately 7832.49 m² of land. The surrounding land uses are noted as mix of commercial, industrial and residential land use.

PHASE ONE ESA FINDINGS

The Phase One ESA findings revealed the following:

- Eight (8) on-site and three (3) off-site Potential Contaminating Activities that resulted in eleven (11) Area of Potential Environmental Concern with the potential to have impacted the study site’s soil and/or groundwater.
- **PCA-1/APEC-1: #28 Gasoline and Associated Products Storage in Fixed Tanks.** Four (4) historic Underground Storage Tanks (USTs) were identified at 16 James Street, within ERIS records and in the previous Phase Two ESAs. This PCAs continues to create an APEC to the study sites soil and groundwater with potential contaminants of concern being Petroleum Hydrocarbons (PHCs), Polycyclic Aromatic Hydrocarbons (PAHs), Metals (by ICP) and Volatile Organic Compounds (VOCs).
- **PCA-2/APEC-2: #28 Gasoline and Associated Products Storage in Fixed Tanks.** Fourteen (14) historic Aboveground Storage Tanks (ASTs) were identified in the FIPs, ERIS and aerial photographs. Ten (10) ASTs (nine (9) 4,000L and one (1) 2,500L) were located west of the building at 16 James Street. Four (4) dyked ASTs (three (3) 20,000L and one (1) 22,000L) were noted southwest of the building currently known as 0 William Street. These ASTs are

PCAs creating an APEC to the study sites soil and groundwater with potential contaminants of concern being PHCs, PAHs, Metals (by ICP) and VOCs.

- **PCA-3/APEC-3: #27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles.** Various garages were noted via FIPs, and Vernons, utilizing the building at 16 James Street from 1970s-2017, some commercial names identified were: Speed Associates, Streetsville Automotive, Ontario Commercial Fuels, Dundas Cars Wholesale, Mississauga Engines, Phil Strudwick Race Cars, and Chayne Enterprises Inc. The presence of these garages represents a PCA resulting in an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals, PAHs, PHCs, and VOCs.
- **PCA-4/APEC-4: #30 Importation of Fill Material of Unknown Quality.** The previous Phase One and Two ESAs identified fill material throughout the parking lot of 2 William Street and 16 James Street. The presence of Fill material of unknown quality represents a PCA that creates an APEC to the soil with potential contaminants of concern being Metals (by ICP), PAHs, PHCs, and Benzene, Toluene, Ethylbenzene, Xylene (BTEX).
- **PCA-5/APEC-5: #28 Gasoline and Associated Products Storage in Fixed Tanks.** The previous Phase One ESA conducted by Bruce Brown Associates noted one (1) 900L empty AST historically used for heating oil in the basement of 6 Queen Street South. This AST represents a PCA that creates an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, PHCs, and BTEX.
- **PCA-6/APEC-6: #30 Importation of Fill Material of Unknown Quality.** Three (3) buildings with basements were noted along Queen Street South in the previous Phase One ESA conducted by Bruce Brown Associates and all three (3) buildings were removed in 2021. The potential for the distribution of fill material within the former building footprint results in an APEC. Investigation is required to confirm that the material was originated on-site. Potential contaminants of concern include: PAHs, BTEX, Metals (by ICP) and PHCs.
- **PCA-7/APEC-7: #11 Commercial Trucking and Container Terminals** – The 1975 Vernon’s indicating that Shaw Ivan Trucking and Bus Parking in 2000s operated at 2 William Street. This Trucking operation represents a PCA that creates an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, PHCs, and BTEX.
- **PCA-8/APEC-8: Other – Parking Lot.** Salt used across the parking lot, for the purpose of de-icing during the winter months, represents a PCA. Salt can accumulate in the soil thus resulting in changes to pH, Sodium Absorption Ratio (SAR) and Electrical Conductivity (EC) levels. This

on-site PCA represents an on-site APEC, however the activity was determined not to be of concern as per O. Reg. 153/04 below.

S.49.1 if an applicable site condition standard is exceeded at a property solely because of one of the following reasons, the applicable site condition standard is deemed not to be exceeded for the purpose of Part XV.1 of the Act: 1. The qualified person has determined, based on a phase one environmental site assessment or a phase two environmental site assessment, that the substance has been applied to surfaces for safety of vehicular or pedestrian traffic under conditions of snow or ice or both.

As such and according to section 49.1 O. Reg. 153/04 (as amended) above, the standards are deemed to be met.

- **PCA-9/APEC-9: #46 - Rail Yards, Tracks and Spurs** - Several railway lines were noted west adjacent of the study site. The presence of the railway tracks represents a PCA resulting in an APEC to the study site's soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, BTEX, and PHCs.
- **PCA-10/APEC-10: #50 Soap and Detergent Manufacturing, Processing and Bulk Storage** – The ERIS and Vernons identified B&W Carwash and Maintenance at 15 James Street. A carwash represents a PCA creating an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, VOCs, and PHCs.
- **PCA-11/APEC-11: #27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles** – Sid's Automotive, Truck Trailer and Car Repair, & historic Trott Transit Ltd. School bus services were noted approximately 13m southeast of the study site at 15 James Street. The presence of the garage represents a PCA resulting in an APEC to the study site's soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, VOCs, and PHCs.
 - Nine (9) additional PCAs were noted within 250 m of the Study Site, however it is unlikely that any contaminants migrating off-site would present an on-site APEC at the study site due to the distance to the site and interpreted groundwater flow direction away from the site.

RECOMMENDATIONS

Based on the above noted findings EON therefore recommends a **Phase Two Environmental Site Assessment to determine the presence/absence of potential contaminants of concern in the soil and groundwater resulting from historic on-site USTs & ASTs, automotive garages, trucking company and fill material of unknown origin and off-site railway, garage and historic car wash.**

LIST OF ACRONYMS

ACM	Asbestos Containing Materials
APEC	Area of Potential Environmental Concern
AST	Aboveground Storage Tank
BH	Borehole
BTEX	Benzene, Toluene, Ethylbenzene, Xylene
CSM	Conceptual Site Model
DSS	Designated Substance Survey
EC	Electrical Conductivity
EPA	Environmental Protection Act
ESA	Environmental Site Assessment
ERIS	Environmental Risk Information Services
FIP	Fire Insurance Plans
GPR	Ground Penetrating Radar
masl	Metres above sea level
mbgs	Metres below ground surface
MECP	Ministry of the Environment, Conservation and Parks
MOECC	Ministry of the Environment and Climate Change
MNR	Ministry of Natural Resources
MW	Monitoring Well
NPCA	Niagara Peninsula Conservation Authority
NPRI	National Pollutant Release Inventory
OC/OCP	Organochlorine Pesticides
PAH	Polycyclic Aromatic Hydrocarbons
PCA	Potentially Contaminating Activity
PCB	Polychlorinated Biphenyl
PCE	Perchloroethylene (tetrachloroethylene)
pH	Power of Hydrogen
PHC	Petroleum Hydrocarbons
QA/QC	Quality Assurance/Quality Control
QP	Qualified Person
RA	Risk Assessment
RSC	Record of Site Condition
SAR	Specific Absorption Rate
SCS	Site Condition Standard
SVOC	Semi-Volatile Organic Compounds
TP	Test Pit
UST	Underground Storage Tank
VOC	Volatile Organic Compounds

Potentially Contaminating Activities (PCAs)
Schedule D Table 2 of O. Reg 511/09

PCA#	Description	PCA#	Description
1	Acid and Alkali Manufacturing, Processing and Bulk Storage	31	Ink Manufacturing, Processing and Bulk Storage
2	Adhesives and Resins Manufacturing, Processing and Bulk Storage	32	Iron and Steel Manufacturing and Processing
3	Airstrips and Hangars Operation	33	Metal Treatment, Coating, Plating and Finishing
4	Antifreeze and De-icing Manufacturing and Bulk Storage	34	Metal Fabrication
5	Asphalt and Bitumen Manufacturing	35	Mining, Smelting and Refining; Ore Processing; Tailings Storage
6	Battery Manufacturing, Recycling and Bulk Storage	36	Oil Production
7	Boat Manufacturing	37	Operation of Dry-Cleaning Equipment (where chemicals are used)
8	Chemical Manufacturing, Processing and Bulk Storage	38	Ordnance Use
9	Coal Gasification	39	Paints Manufacturing, Processing and Bulk Storage
10	Commercial Autobody Shops	40	Pesticides (including Herbicides, Fungicides and Anti-Fouling Agents) Manufacturing, Processing, Bulk Storage and Large-Scale Applications
11	Commercial Trucking and Container Terminals	41	Petroleum-derived Gas Refining, Manufacturing, Processing and Bulk Storage
12	Concrete, Cement and Lime Manufacturing	42	Pharmaceutical Manufacturing and Processing
13	Cosmetics Manufacturing, Processing and Bulk Storage	43	Plastics (including Fibreglass) Manufacturing and Processing
14	Crude Oil Refining, Processing and Bulk Storage	44	Port Activities, including Operation and Maintenance of Wharves and Docks
15	Discharge of Brine related to oil and gas production	45	Pulp, Paper and Paperboard Manufacturing and Processing
16	Drum and Barrel and Tank Reconditioning and Recycling	46	Rail Yards, Tracks and Spurs
17	Dye Manufacturing, Processing and Bulk Storage	47	Rubber Manufacturing and Processing
18	Electricity Generation, Transformation and Power Stations	48	Salt Manufacturing, Processing and Bulk Storage
19	Electronic and Computer Equipment Manufacturing	49	Salvage Yard, including automobile wrecking
20	Explosives and Ammunition Manufacturing, Production and Bulk Storage	50	Soap and Detergent Manufacturing, Processing and Bulk Storage
21	Explosives and Firing Range	51	Solvent Manufacturing, Processing and Bulk Storage
22	Fertilizer Manufacturing, Processing and Bulk Storage	52	Storage, maintenance, fueling and repair of equipment, vehicles, and material used to maintain transportation systems
23	Fire Retardant Manufacturing, Processing and Bulk Storage	53	Tannery
24	Fire Training	54	Textile Manufacturing and Processing
25	Flocculants Manufacturing, Processing and Bulk Storage	55	Transformer Manufacturing, Processing and Use
26	Foam and Expanded Foam Manufacturing and Processing	56	Treatment of Sewage equal to or greater than 10,000 litres per day
27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	57	Vehicles and Associated Parts Manufacturing
28	Gasoline and Associated Products Storage in Fixed Tanks	58	Waste Disposal and Waste Management, including thermal treatment, landfilling and transfer of waste, other than use of biosoils as soil conditioners
29	Glass Manufacturing	59	Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products
30	Importation of Fill Material of Unknown Quality

1.0 **INTRODUCTION**

EON Environmental Consulting Ltd. (EON) was retained by City Park Homes (Streetsville) Inc. to conduct a Phase One Environmental Site Assessment (ESA) Update of the property located at 6, 10, and 12 Queen Street South, 16 James Street, 0 and 2 William Street, Mississauga, ON (study site). Future plans include site re-development, the Phase One ESA was completed in accordance with O. Reg. 153/04 as amended, for future use in submission of a Record of Site Condition (RSC) with the Ministry of the Environment, Conservation and Parks (MECP), as required. The site location is shown on Figure 1 and the site layout and adjacent land uses are depicted on Figure 2.

1.1 **Phase One Property Information**

Municipal address:	0, 10, 12 Queen Street South, 16 James Street, & 0, 2 William Street, Mississauga, ON
Client(s):	City Park Homes (Streetsville) Inc.
UTM co-ordinates:	Northing: 4,826,798.53, Easting: 603,141.19, Zone: 17T
Elevation:	158.85 masl
Approx. site area:	7832.49 m ²

1.2 **Limitations and Exceptions of Report**

EON Environmental Consulting Ltd. prepared this report for the account of: City Park Homes (Streetsville) Inc. The material in it reflects EON's best judgement based on the information discovered at the time of preparation, within the Phase One ESA scope of work. The investigative procedures and format of this report generally follow the guidelines established in: Part XV.1 of the Environmental Protection Act, per O. Reg. 153/04, as amended. Any information presented concerning materials at the site is based on information gathered during historical document search and site reconnaissance only. There may be materials and/or subsurface soil and/or groundwater conditions on-site, which are not represented by these non-invasive investigations. Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. EON accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Declaration: EON Environmental Consulting Ltd., and its' Officers and Directors, declare no conflicting business or interests with the client or the subject property.

2.0 SCOPE OF INVESTIGATION

The objectives of the Phase One ESA Update were an investigation of the subject property and adjacent lands conducted in accordance with CSA Z768-01, O. Reg. 511/09 and O. Reg. 153/04 as amended, and under the supervision of a Qualified Person in order to determine the likelihood that one or more contaminants may have affected any land and/or water on, in or under the property. Potentially Contaminating Activities (PCAs), and contaminants or materials of potential concern, if revealed on-site, or at properties located within a 250 m radius of the site, were evaluated as to whether they generated 'Areas of Potential Environmental Concern' (APECs). PCAs are itemized in Schedule D Table 2 of O. Reg 511/09. APECs if identified were individually evaluated whether they were triggers for additional investigation via a Phase Two ESA.

2.1 Procedures

The Phase One ESA Update scope of investigation includes review of historical background information via examination of:

- Previous Phase One and Two reports;
- Fire Insurance Plans;
- Environmental Risk Information System (EcoLog ERIS);
- Mapping resources including: Niagara Navigator Thematic, MNR Heritage Area, Topographic, Quaternary, Bedrock and Geology;
- Aerial photographs; and
- Water well records from Ontario Oil, Gas & Salt Resources Library & Ministry of the Environment, Conservation and Parks.

A site reconnaissance was completed to observe site grounds, on-site structures (if applicable), and adjacent properties in order to identify PCAs and APECs. This information is utilized to formulate a preliminary Conceptual Site Model regarding potential contaminants, contaminant migration pathways, and human and/or ecological receptors at the site.

3.0 RECORDS REVIEW

3.1 General

3.1.1 Phase One Study Area Determination

Interpretation of the results of the review of Fire Insurance Plans (FIPs), EcoLog ERIS data-based information, air photograph interpretation, and other historic environmental documents, in addition to the site investigation, revealed that it was not necessary to expand the data search beyond a 250 m radius of the property, the minimum area of study.

3.1.2 First Developed Use Determination

The first developed land use for the western portion of the site was commercial, as determined through FIPs dating 1939 and residential land use for the eastern portion of the site as illustrated first in the 1954 aerial photographs.

3.1.3 Fire Insurance Plans

ERIS ENVIROSAN returned two (2) FIPs dated 1904 & 1939, one (1) Risk report dated 2006, and two (2) Fire Inspection Reports dated 1971 & 1981.

The 1904 FIP only illustrated the southern portion of the study area, of which nothing of significance was noted other than the Credit Valley Railway ran along John Street (in the same location as current day). The study site was not illustrated. Mullet Crete was noted along approximately 211m southwest of the study area.

The 1939 FIP illustrated three (3) structures located at 16 James Street. The main building was a single storey commercial building labelled "SASH Factory" with two (2) smaller buildings with a note "Lumber Shed". A freight shed was noted at 138 William Street, approximately 84m south-southeast from the study site. One (1) Garage was noted at 44 Queen Street South, approximately 175m southeast from the study site. The railway was noted as "Canadian Pacific Railway" with two (2) railway tracks adjacent to the study site.

- The 1979 Fire Inspection report for 16 James Street utilized for an auto repair garage owned by Streetsville Automotive. The business was noted as a repair shop for tires and other automotive parts, with no body work and no spray painting. One (1) hot tank (acid solution) for cleaning engines was noted on the main floor. The building was only one (1) floor with no basement.
- The 1981 Fire Inspection Report for 16 James Street was occupied by Speed Associates. Speed Associates operated as an auto repair shop with one (1) arc welder, a parts cleaning

tank, and dry chemicals on-site. Heating system consisted of two (2) oil fired forced air furnaces.

- The 2006 FIP report indicated Trott Transit as the major tenant at 16 James Street, the rest of the building/property was used by the owner at the time (982178 Ontario Ltd. a/o Ontario Competition Fuels). The building was estimated to have been constructed in 1955, with no basement, occupying 521 m². The following were noted from the report:
 - Five (5) full serve pumps were connected to nine (9) 4,000L metal Aboveground Storage Tanks (ASTs) and one 2500L AST all containing 98 octane and 110 octane. These ASTs were not dyked/not protected and noted west of the building (16 James Street).
 - Three (3) additional 20,000L and one (1) additional 22,000L dyked ASTs were noted southwest of the building (16 James Street).
 - Five (5) additional empty ASTs (1-40,000L, 1-9,000L, 2-4,000L, 1-5,000L and 1-2,000L) were noted west site of the building (16 James Street).
 - There is a 2.42m x 2.42m kiosk west of the full serve pumps.

Each of these land uses are considered Potentially Contaminating Activities (PCAs). The FIPs are located in Appendix A.

3.1.4 City Directory Search

Vernon's City Directories for the City of Mississauga were ordered from ERIS, and listings dating from 1958 to 2021 were available. 10 and 12 Queen Street South were only listed as residential. The following is a summary of the business listed at the study site and other areas of concern:

- **15 James Street** had various autobody shops such as: JNS Service, Trott Transit Ltd., B&W Carwash & Maintenance, Sports & Vintage Motor Cars, and Streetsville Builders Supply Ltd.
- **16 James Street** had various industrial/commercial business such as: Ontario Commercial Fuels, Ontario Competition Fuels, OCF Heating Oils, Mississauga Engines, Pro Racing Fuels, Streetsville Automotive, Speed Associates, and Phil Studwick Race Cars.
- **2 William Street** was only noted between 1996-1975 with the following industrial/commercial businesses: Shaw Ivan Trucking, Mississauga Engines, and Rel Traffic Services Ltd.
- **6 Queen Street** was listed as a mix Residential and the following light commercial businesses Credit Valley Animal, Canadiana Mirror, and Grewal Rajwant MD (Physicians office).

A summary table of Vernon's research is provided in Appendix B.

3.1.5 Environmental Reports

Various environmental reports were conducted on the study site. The findings are summarized below.

- Phase Two ESA by DML Environmental Services Ltd. – July 2016
 - Two (2) anomalies were identified during the Private locates where the suspected Underground Storage Tanks were. Two (2) boreholes were advanced in these areas.
 - Three (3) boreholes and one (1) monitoring well was advanced in the northern portion of the site to inspect imported FILL and the reported spread of used oil for dust control.
 - Two (2) boreholes and one (1) converted to a monitoring well in the area of Aboveground Storage Tank (AST) farm. Soil and groundwater exceedances were noted.
 - One (1) borehole/monitoring well was advanced north of the building at 16 James Street.
 - Two (2) boreholes were advanced inside the garage.
- Phase One ESA by Bruce A. Brown Associates – August 2020:
 - One (1) hot dip tank was noted during the phase one site visit and was reportedly used by the on-site landscaping business.
 - Motor vehicle service and a bus depot with fueling facilities present a potential source of environmental impact. Was determined to not be a high risk to the study sit because it was remote from the eastern portion of the property.
- Phase Two ESA by Bruce A. Brown Associates – November 2020:
 - This Phase Two ESA acted as supplemental work to a previous phase two conducted by DML environmental in 2016. The original phase two site work included ten test locations which included two (2) inside the building. Groundwater exceedances to Table 3 for PHCs F1 and methyl tert butyl ether (MTBE) were noted.
 - Three (3) additional boreholes/monitoring wells were advanced north, south, and east of the originally documented exceedance.
 - The samples submitted for analysis met Table 3 residential/parkland standards.

3.2 Environmental Source Information

The following agency databases and documents were reviewed where available and discussed further where necessary, for information regarding the study site and the surrounding area to determine the presence of any activity or material of potential environmental concern.

Source	Description of Data Analysis
National Pollutant Release Inventory (NPRI)	No pertinent information was gleaned from NPRI database regarding the subject site or adjacent properties.
PCB Waste Storage Inventory	A review of the "Ontario Inventory of PCB Storage Sites" (MOE July 2000) indicated the Study Site was not a registered PCB storage site. Adjacent sites were also not listed in the PCB Inventory.
Environmental Registry of Ontario	A search was conducted on the Environmental Registry database relating to policy, regulation, act, instrument, bulletin, and appeal. Special attention was taken for Environmental Compliance Approvals (ECAs), Permits to Take Water, and Certificates of Property Use (CPU). No records were found relating to the Study Site or adjacent sites.
Coal Gasification Plants	A review of the "Inventory of Coal Gasification Plant Waste Sites" (MOE, April 1989) indicated a former coal gasification plant in Brampton near the northeast corner of Nelson and George Streets, approximately 9 km north of the phase one property. The facility provided gas for street lighting until decommissioned in 1909. The location is far enough from the study site to not cause any negative environmental impacts.
Waste Disposal Site Inventory	Review of the MOE Waste Disposal Site Inventory, June 1991 did not indicate any historic waste disposal sites in the Study Area. No waste disposal sites were identified within the study area.
Waste Management Records	No waste management records were available for the Study Site.
TSSA Retail Fuel Storage Tank Info	A request was submitted to the Technical Safety and Standards Authority (TSSA) for information concerning fueling systems (USTs, ASTs) at the study site. No response was received from TSSA at the time of report issuance. The record will be appended to the report when it is made available.
Record of Site Condition (RSC)	EON searched the Brownfield Environmental Site Registry and no RSCs were identified for the Study Site or adjacent sites.
Ministry of Natural Resources (MNR)	The Credit River is 530m northeast and 390m east of the study area and runs northwest to southeast. A map showing the MNR Natural Heritage Areas is provided in Appendix C.

3.2.1 EcoLog ERIS Database

The EcoLog ERIS report returned one hundred forty-two (142) environmental records, thirty-two (32) of the records were affiliated with the study site and one hundred ten (110) from within 0.25 km of the study site. On-site records were associated with fuel storage tanks and borehole/monitoring well records. Records of significance have been summarized below, with the full EcoLog ERIS report located in Appendix D.

Municipal Address	Company	EcoLog ERIS Record	Description	Distance (m) from Study Site	PCA and/or APEC to Study Site
16 James Street	Ontario Commercial Fuels	DTNK, PRT, FST	Two (2) Gasoline USTs, one 1500 L and one 22730 L Two (2) diesel USTs, both 22730 L 2 Private and Retail Fuel Storage Tanks Install Dates: 1978 Install Years: 1990-1996	On-site	PCA resulting in APEC
15 James Street	Trott Transit Ltd. 1906661 Ontario Inc.	GEN	2003-2016, Generation of aliphatic solvents, petroleum distillates, oil skimming's & sludges, Waste oils & lubricants, Light fuels	13 m SE	PCAs resulting in APECs
	B&W Car Wash Maintenance LTS	SCT	Established 1988 Service Industry Machinery, N.E.C Commercial and Service Industry Machinery Manufacturing

3.3 Physical Setting

3.3.1 Aerial Photographs

Aerial photographs from 1954, 1966, 1980, 1985, 1992, 2000, 2009, 2019 and 2022 were examined and revealed that the Study Site was residential in 1921, and commercial from at least 1954 to present day. The Study Area was a mix of residential, commercial and institutional. Aerial photographs are contained in Appendix E, with brief summaries provided below.

Date	Comments
1954	The 1954 aerial photograph shows William Street extended north to Britannia, and an additional house on the corner of Queen Street. The three (3) residences are present on the west side of Queen Street. There is a commercial store located at 16 James Street, with several small accessory buildings or structures in the rear yard behind it.
1966	The 1966 aerial photograph shows that the underpass for Britannia was widened to two (2) lanes with four (4) sets of railway tracks above. In addition to the original buildings, there were several small sheds behind 16 James, and a row of apparent school buses parked facing the rear yards to the east. Residential dwellings and a public school were noted west of the CPR Railway.
1980 & 1985	No significant changes were noted in the 1980 & 1985 aerial photographs from 1966 aerial photograph.
1992	The 1992 aerial photograph showed an additional shed located behind 12 Queen Street South. No other significant changes were noted.
2000	The 2000 aerial photograph showed Britannia widened to four (4) lanes, with 4 Queen Street South and the square building south of the road being demolished for the road widening. Numerous small sheds were noted behind 16 James Street.
2009	The 2009 aerial photograph showed an extension to the shed behind 12 Queen Street South. Numerous buses were identified behind 16 James Street, and along the William Street Stub Road. 2-14, & 16 James Street were noted to have newly built townhouses. The rear portion of 6 Queen Street South was developed into a large parking lot. Numerous small sheds and storage containers were identified at the back of 16 James Street.
2019	The 2019 aerial photograph showed six (6) residential dwellings and small vehicles parked on-site. There was a new structure with a shed roof dividing the rear yard, and several containers or bulk-lift units.
2022	All buildings along Queen Street and the building on William Street were demolished leaving one (1) building on 16 James Street. No other significant changes were noted.

3.3.2 Topography, Hydrology, Geology

Topography

Ontario Base Map was reviewed for the Phase One study area. The geodetic ground surface elevation of the site is approximately 158.85 meters above sea level (masl). The study site did not have a notable slope. The overall study area slope is approximately 1.5% east southeast.

Geology and Physiography

The Phase One property and area is generally characterized as till plain, with some till moraine within the area (Chapman and Putnam, 1984. Map: P.2715). Review of the maps “*Quaternary Geology of Ontario – Southern Sheet*” (Ontario Geological Survey Map 2556), and *Bedrock Geology of Ontario* (Ontario Geological Survey Map 2544) indicated that the subject site overburden was underlain by bedrock noted as part of the Queenston Formation. The approximate depth to bedrock, as documented from surrounding well records is at 15 mbgs (metres below ground surface) and consisted of shale.

Hydrology:

The depth to the water table is approximately 1.34-2.48mbgs for the site as identified in the Phase Two ESA by Bruce A. Brown Associates, 2020. Surface water drainage would be into catch basins on-site and municipal sewers along Queen Street South, James Street and William Street. The

overall groundwater flow for the area is inferred as east and northeast towards Lake Ontario and the Credit River. The site is noted to be within the Mary Fix Creek – Credit River Watershed.

3.3.3 Fill Materials

The previous Phase Two ESAs identified shallow Fill material within the boreholes throughout the parking lot at 2 William Street and 16 James Street. The material comprised of mixed fill material including topsoil, vegetation, and grindings from tree removal. As identified through aerial photo research, previous building structures on-site have been removed over the history of the Phase One study site. Fill may have been placed in the locations of the former structures in the basement area. The former building structure on 16 James Street had slab on grade.

3.3.4 Water Bodies and Areas of Natural Significance

No water bodies and/or areas of natural significance are located on or adjacent to the study site. Mullet Creek is approximately 220m west of the study site, and The Credit River is located approximately 530 m northeast and 390m east of the study site.

3.3.5 Well Records

A review of the water well records from Ontario Oil, Gas & Salt Resources Library as well as the Ministry of the Environment, Conservation and Parks (MECP) well records revealed that there were six (6) well records for the study site, all pertaining to well decommissioning, and six (6) wells records were available from within the study area (250 m radius). Each record can contain information pertaining to date of installation, well use, type of stratigraphy encountered and groundwater levels. The stratigraphy within the well record was described as follows:

Well ID: A264593	
Location: on-site (16 James Street)	
Depth (mbgs)	Stratigraphy
0-3.05	Brown Sand with some Cobble and Clay (loose)
3.05 – 7.01	Grey Sand with some clay (loose, moist)

Mbgs = meters below ground surface

Details of the well records are located in Appendix F. No reported wells within the study area extended to shale bedrock at depth.

3.4 Site Operating Records

There were no applicable site operating records available for review.

4.0 INTERVIEW

Interviews were initially carried out July 21, 2020, by EON's Senior Engineer, on-site with the owner's daughter of the property vendor and renovator for 16 James Street. The information gathered from the interviewed party is considered accurate and is consistent with the historical records review for the Phase One ESA property and adjacent sites. The following is a summary of the information provided:

- The location of any former fuel islands or tanks were unknown to the interviewee.
- The interviewee also did not indicate any awareness of spills, fires, or other incidents which may have resulted in any potential environmental impact.
- 6 Queen Street South was a former 1950s residential dwelling which had been renovated into a medical office. It had an unfinished basement with forced air gas heating. An empty 900L fuel tank was noted in the basement, no odours or leaks were noted during inspection.
- 10 Queen Street South was a former two-storey detached residential dwelling with a full unfinished basement and a one-storey rear addition. The former heating type was forced air gas with supplementary electric heat under some windows.
- 12 Queen Street South was a one & a half story frame home with a full unfinished basement.
- 16 James Street had a 205L steel drum for used waste oil.

The full record of interview is located in Appendix G.

5.0 SITE RECONNAISSANCE

5.1 General Requirements

The site investigation took place on September 19th, 2023 at approximately 7:00 am and was conducted by EON staff member Craig Colbourne, *Environmental Technician* and overseen by Kevin Christian, *Qualified Person*. The Phase One property is considered an Enhanced Investigation Property (EIP). The weather conditions during site reconnaissance were clear and sunny, approximately 15°C and all areas of the Phase One property were accessible.

5.2 Specific Observations at Phase One Property

The purpose of the site reconnaissance was to identify any PCAs and/or APECs that could present the potential for contaminant sources available for migration via air, surface drainage, soil, and/or groundwater flow to human and/or ecological receptors. A photo log highlights the site in addition to surrounding land uses and is provided in Appendix H. Findings are summarized below and discussed further where necessary. Site layout is illustrated in Figure 3, including annotation to the photographs taken during site reconnaissance.

5.2.1 Exterior Observations

- There are currently no buildings on-site (Photos 9, 10, and 11);
- No ASTs/USTs were found on-site;
- Below-ground structures and utilities were unknown at the time of site reconnaissance, including the type and locations of water, sewer, electrical, and/or gas;
- The ground cover at the Site consisted of gravel, asphalt and grass (Photos 5, 6, and 7) and new concrete which will be used for a temporary sales pavilion, noted in photo 11;
- The site occupies an area of approximately 7832.49 m² of land.

Exterior Focus Items	Exterior Location / Description
Storage tanks (AST/UST)	None Observed
Wells	None Observed All previously installed wells were decommissioned in 2016.
Wastewater	None Observed
Pits and lagoons	None Observed
Stained materials	Throughout the commercial/industrial portion of the study site.
Stressed vegetation	Noted throughout the study site.
Fill	Pile of topsoil and grindings from trees on-site observed at 6 Queen Street (photo 9)
Surface Water	None Observed
Watercourses, or ditches	None Observed
Equipment	None Observed
Debris	None Observed
Chemical storage	None Observed

5.3 Surrounding Properties in the Phase One ESA Study Area

The surrounding land uses were a mix of commercial, industrial, and residential lots (as seen in Photos 12-18), with some institutional land use located within the Study Area. Further descriptions of surrounding property use are presented below.

Description	Current Use	Past Use	Source used
Adjacent/ Surrounding Properties:	<p>North: Britannia Road and Commercial beyond.</p> <p>South: James Street and Commercial beyond.</p> <p>East: Residential and commercial Fronting on Queen Street</p> <p>West: Metro-links Go Transit line and Canadian Pacific Railway</p>	<p>North: Britannia Road and Residential/ Commercial beyond.</p> <p>South: James Street and Commercial</p> <p>East: Residential/ Commercial fronting Queen Street.</p> <p>West: Canadian Pacific Railway</p>	<p>Historical document research, aerial photos and site investigation (September 19th, 2023).</p>

6.0 REVIEW AND EVALUATION OF INFORMATION

6.1 Current and Past Uses – Subject Site

The historical documents research and the site reconnaissance revealed the Study Site had been developed for residential and commercial purposes dating from the late 1900's to present day.

6.2 Potentially Contaminating Activities

Analysis of the historical research, and information gathered during site reconnaissance, was used to determine if there were any PCAs, current or historic, found on-site and/or within the Study Area that may have resulted in creating an on-site APEC. PCA's within the study area are depicted in Figure 4a.

6.2.1 Historical On-site PCAs

Seven (7) historic on-site PCA were noted within the study site.

- **PCA-1/APEC-1: #28 Gasoline and Associated Products Storage in Fixed Tanks.** Four (4) historic Underground Storage Tanks (USTs) were identified at 16 James Street, within ERIS records and in the previous Phase Two ESAs. This PCAs continues to create an APEC to the study sites soil and groundwater with potential contaminants of concern being Petroleum Hydrocarbons (PHCs), Polycyclic Aromatic Hydrocarbons (PAHs), Metals (by ICP) and Volatile Organic Compounds (VOCs).
- **PCA-2/APEC-2: #28 Gasoline and Associated Products Storage in Fixed Tanks.** Fourteen (14) historic Aboveground Storage Tanks (ASTs) were identified in the FIPs, ERIS and aerial photographs. Ten (10) ASTs (nine (9) 4,000L and one (1) 2,500L) were located west of the building at 16 James Street. Four (4) dyked ASTs (three (3) 20,000L and one (1) 22,000L) were noted southwest of the building currently known as 0 William Street. These ASTs are PCAs creating an APEC to the study sites soil and groundwater with potential contaminants of concern being PHCs, PAHs, Metals (by ICP) and VOCs.
- **PCA-3/APEC-3: #27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles.** Various garages were noted via FIPs, and Vernons, utilizing the building at 16 James Street from 1970s-2017, some commercial names identified were: Speed Associates, Streetsville Automotive, Ontario Commercial Fuels, Dundas Cars Wholesale, Mississauga Engines, Phil Strudwick Race Cars, and Chayne Enterprises Inc. The presence of these garages represents a PCA resulting in an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals, PAHs, PHCs, and VOCs.

- **PCA-4/APEC-4: #30 Importation of Fill Material of Unknown Quality.** The previous Phase One and Two ESAs identified fill material throughout the parking lot of 2 William Street and 16 James Street. The presence of Fill material of unknown quality represents a PCA that creates an APEC to the soil with potential contaminants of concern being Metals (by ICP), PAHs, PHCs, and Benzene, Toluene, Ethylbenzene, Xylene (BTEX).
- **PCA-5/APEC-5: #28 Gasoline and Associated Products Storage in Fixed Tanks.** The previous Phase One ESA conducted by Bruce Brown Associates noted one (1) 900L empty AST historically used for heating oil in the basement of 6 Queen Street South. This AST represents a PCA that creates an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, PHCs, and BTEX.
- **PCA-6/APEC-6: #30 Importation of Fill Material of Unknown Quality.** Three (3) buildings with basements were noted along Queen Street South in the previous Phase One ESA conducted by Bruce Brown Associates and all three (3) buildings were removed in 2021. The potential for the distribution of fill material within the former building footprint results in an APEC. Investigation is required to confirm that the material was originated on-site. Potential contaminants of concern include: PAHs, BTEX, Metals (by ICP) and PHCs.
- **PCA-7/APEC-7: #11 Commercial Trucking and Container Terminals** – The 1975 Vernon’s indicating that Shaw Ivan Trucking and Bus Parking in 2000s operated at 2 William Street. This Trucking operation represents a PCA that creates an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, PHCs, and BTEX.

6.2.2 Recent On-site PCAs

One (1) recent PCAs were identified at the study site.

- **PCA-8/APEC-8: Other – Parking Lot.** Salt used across the parking lot, for the purpose of de-icing during the winter months, represents a PCA. Salt can accumulate in the soil thus resulting in changes to pH, Sodium Absorption Ratio (SAR) and Electrical Conductivity (EC) levels. This on-site PCA represents an on-site APEC, however the activity was determined not to be of concern as per O. Reg. 153/04 below.

S.49.1 if an applicable site condition standard is exceeded at a property solely because of one of the following reasons, the applicable site condition standard is deemed not to be exceeded for the purpose of Part XV.1 of the Act:

1. The qualified person has determined, based on a phase one environmental site assessment or a phase two environmental site assessment, that the substance has been

applied to surfaces for safety of vehicular or pedestrian traffic under conditions of snow or ice or both.

As such and according to section 49.1 O. Reg. 153/04 (as amended) above, the standards are deemed to be met.

6.2.3 Adjacent Sites PCAs

Three (3) PCAs were identified at adjacent sites to the Phase One property.

- **PCA-9/APEC-9: #46 - Rail Yards, Tracks and Spurs** - Several railway lines were noted west adjacent of the study site. The presence of the railway tracks represents a PCA resulting in an APEC to the study site's soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, BTEX, and PHCs.
- **PCA-10/APEC-10: #50 Soap and Detergent Manufacturing, Processing and Bulk Storage** – The ERIS and Vernons identified B&W Carwash and Maintenance at 15 James Street. A carwash represents a PCA creating an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, VOCs, and PHCs.
- **PCA-11/APEC-11: #27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles** – Sid's Automotive, Truck Trailer and Car Repair, & historic Trott Transit Ltd. School bus services were noted approximately 13m southeast of the study site at 15 James Street. The presence of the garage represents a PCA resulting in an APEC to the study site's soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, VOCs, and PHCs.

6.2.4 Study Area PCAs

Nine (9) additional PCAs were noted within 250 m of the study site, however it is unlikely that any contaminants migrating off-site would present an on-site APEC at the study site due to the distance to the site and interpreted groundwater flow direction. Further details regarding these properties are provided below.

Business Type	PCA (Schedule D)	Address	Reason for discounting
Active Green+	PCA-12: #27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	14 Queen Street North	<ul style="list-style-type: none"> • 167.9m northwest of study site • Inferred east southeast groundwater flow direction for study area • Cross-gradient from study site, and lower elevation
Active Green+Ross Tire & Automotive Centre	PCA-13: #28 – Gasoline and Associated Products Storage in Fixed Tanks	14 Queen Street North	<ul style="list-style-type: none"> • 167.9m northwest of study site • Inferred east southeast groundwater flow direction for study area • Cross-gradient from study site, and lower elevation
A4 Motors	PCA-14: #27 – Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	26 Queen Street North	<ul style="list-style-type: none"> • 204.9m northwest of the study site • Inferred east southeast groundwater flow direction for study area • Cross-gradient from study site, and lower elevation
Petro-Canada	PCA-15: #28 – Gasoline and Associated Products Storage in Fixed Tanks	26 Queen Street North	<ul style="list-style-type: none"> • 204.9m northwest of the study site • Inferred east southeast groundwater flow direction for study area • Cross-gradient from study site, and lower elevation
Ken Champ Auto Inc	PCA-16: #27 – Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	40 Queen Street North	<ul style="list-style-type: none"> • 212m northwest of the study site • Inferred east southeast groundwater flow direction for study area • Cross-gradient from study site, and lower elevation
Meineke Car Care Centre	PCA-17: #27 – Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	57 Queen Street North	<ul style="list-style-type: none"> • 230m northwest of the study site • Inferred east southeast groundwater flow direction for study area • Cross-gradient from study site, and lower elevation
Streetsville Gas	PCA-18: #28 – Gasoline and Associated Products Storage in Fixed Tanks	57 Queen Street North	<ul style="list-style-type: none"> • 230m northwest of the study site • Inferred east southeast groundwater flow direction for study area • Cross-gradient from study site, and lower elevation
Garage	PCA-19: #27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	44 Queen Street South	<ul style="list-style-type: none"> • 175m southeast of the study site • Inferred east southeast groundwater flow direction for study area • Down-gradient from study site, and lower elevation
-	PCA-22: #27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	138 William Street	<ul style="list-style-type: none"> • 84m south-southeast of the study site • Inferred east southeast groundwater flow direction for study area • Cross-gradient from study site, and lower elevation

Other land uses within the study area North, South, East, and West of the study site did not exhibit visible items of concern that would constitute PCAs relevant to the subject site regarding potential for impact to soil and/or groundwater.

6.3 Areas of Potential Environmental Concern

Eleven (11) previously described PCAs were determined to create on-site APECs with the potential to impact the Phase One study site's soil, groundwater, and/or sediment. On-site APECs are illustrated in Figure 4b, with further details provided below in table format.

Areas of Potential Environmental Concern ¹	Location of Area of Potential Environmental Concern on Phase One Property	Potentially Contaminating Activity ²	Location of PCA (on-site or off-site)	Contaminants of Potential Concern ³	Media Potentially Impacted (Ground water, soil and/or sediment)
APEC-1	Between 2 William Street and 16 James Street in the eastern portion parking lot.	#28 Gasoline and Associated Products Storage in Fixed Tanks.	On-site	PHCs, PAHs, VOCs, and Metals	Soil and groundwater
APEC-2	Western portion of 16 James Street and whole section of 0 William Street	#28 Gasoline and Associated Products Storage in Fixed Tanks.	On-site	PHCs, PAHs, VOCs, and Metals	Soil and groundwater
APEC-3	Whole portion of 16 James Street	#27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	On-site	PHCs, PAHs, VOCs, and Metals	Soil and groundwater
APEC-4	Parking lot of 2 William Street and portions of 16 James Street	#30 Importation of Fill Material of Unknown Quality	On-site	PHCs, PAHs, BTEX, and Metals	Soil
APEC-5	Surrounding the historic footprint of 6 Queen Street	#28 Gasoline and Associated Products Storage in Fixed Tanks.	On-site	PHCs, PAHs, BTEX, and Metals	Soil and groundwater
APEC-6	Within the building footprint of 6, 10 & 12 Queen Street	#30 Importation of Fill Material of Unknown Quality	On-site	PHCs, PAHs, BTEX, and Metals	Soil*
APEC-7	Parking lot of 2 William Street and portions of 16 James Street	#11 Commercial Trucking and Container Terminals	On-site	PHCs, PAHs, VOCs, and Metals	Soil and groundwater
APEC-8	Parking lot	Other – Parking Lot	Off-Site	EC/SAR/pH	Soil and groundwater

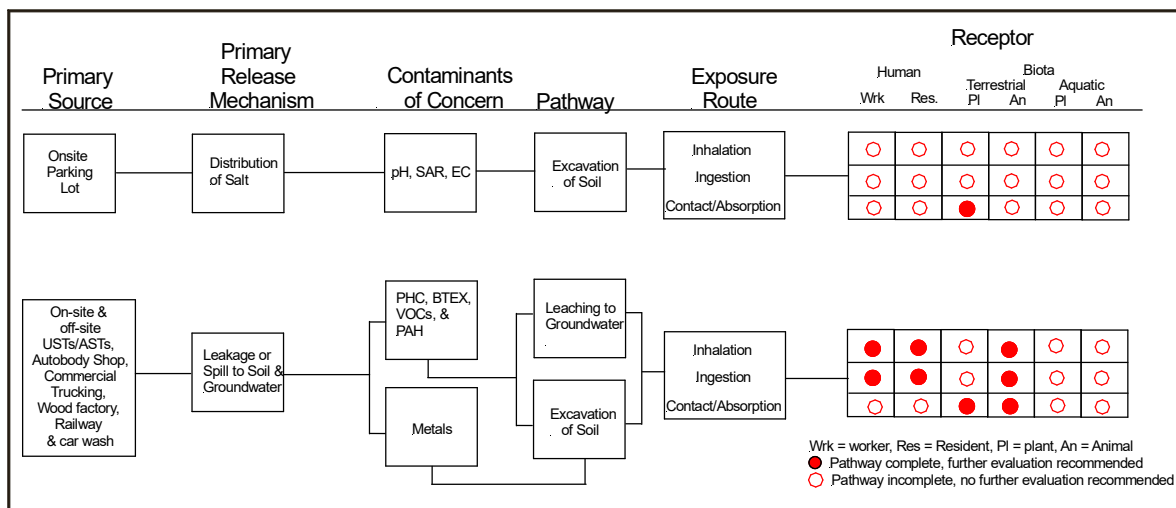

Areas of Potential Environmental Concern ¹	Location of Area of Potential Environmental Concern on Phase One Property	Potentially Contaminating Activity ²	Location of PCA (on-site or off-site)	Contaminants of Potential Concern ³	Media Potentially Impacted (Ground water, soil and/or sediment)
APEC-9	Western portion of the study site	#46 - Rail Yards, Tracks and Spurs	Off-Site	PHCs, PAHs, BTEX, and Metals	Soil and groundwater
APEC-10	Whole portion of 16 James Street	#50 Soap and Detergent Manufacturing, Processing and Bulk Storage	Off-Site	PHCs, PAHs, VOCs, and Metals	Soil and groundwater
APEC-11	Whole portion of 16 James Street	#27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	Off-Site	PHCs, PAHs, VOCs, and Metals	Soil and groundwater

Note: *investigation is required to confirm that the material originated on-site.

The Phase One research is considered valid with no absence of information and was completed in full and considered accurate in determining the APECs located on-site.

6.4 Phase One Conceptual Site Model

The conceptual site model qualitatively considers the potential interaction of primary sources of environmental concern, with suspected contaminants of concern, and the pathway(s) and exposure route(s) to the receptors. Target contaminants of SAR/EC/pH, PHCs, BTEX, VOCs and PAHs were identified with potential migration pathways to human and/or biota receptors.

7.0 CONCLUSIONS & RECOMMENDATIONS

EON Environmental Consulting Ltd. was retained by City Park Homes (Streetsville) Inc. to conduct a Phase One Environmental Site Assessment (ESA) of the property located at 6, 10, and 12 Queen Street South, 16 James Street, 0 and 2 William Street, Mississauga, ON. The objectives of the Phase One ESA were an investigation of the subject property and adjacent lands conducted in accordance with O. Reg. 153/04 as amended, and under the supervision of a Qualified Person in order to determine the likelihood that one or more contaminants may have affected any land and/or water on, in or under the property.

Potentially Contaminating Activities (PCAs), and contaminants or materials of potential concern, if revealed on-site, or at properties located within a 250 m radius of the site, were evaluated as to whether they generated 'Areas of Potential Environmental Concern' (APECs). PCAs are itemized in Schedule D Table 2 of O. Reg 511/09. APECs, if identified, were individually evaluated whether they were triggers for additional investigation via a Phase Two ESA.

PHASE ONE ESA SCOPE OF INVESTIGATION

The Phase One ESA scope of investigation included review of historical background information via examination of:

- Previous Phase One and Two reports;
- Fire Insurance Plans;
- Vernon's Street Directory;
- Environmental Risk Information System (EcoLog ERIS);
- Mapping resources including: Mississauga Navigator Thematic, Google Earth, MNR Heritage Area, Topographic Maps, Quaternary, Bedrock and Geology;
- Aerial photographs; and
- Water well records from Ontario Oil, Gas & Salt Resources Library & MECP.

A site reconnaissance was completed to observe site grounds and adjacent properties in order to identify PCAs and APECs. This information was utilized to formulate a preliminary Conceptual Site Model regarding potential contaminants, contaminant migration pathways, and human and/or ecological receptors at the site.

PHASE ONE ESA FINDINGS

The Phase One ESA findings revealed the following:

- Eight (8) on-site and three (3) off-site Potential Contaminating Activities that resulted in eleven (11) Area of Potential Environmental Concern with the potential to have impacted the study site's soil and/or groundwater.
- **PCA-1/APEC-1: #28 Gasoline and Associated Products Storage in Fixed Tanks.** Four (4) historic Underground Storage Tanks (USTs) were identified at 16 James Street, within ERIS records and in the previous Phase Two ESAs. This PCAs continues to create an APEC to the study sites soil and groundwater with potential contaminants of concern being Petroleum Hydrocarbons (PHCs), Polycyclic Aromatic Hydrocarbons (PAHs), Metals (by ICP) and Volatile Organic Compounds (VOCs).
- **PCA-2/APEC-2: #28 Gasoline and Associated Products Storage in Fixed Tanks.** Fourteen (14) historic Aboveground Storage Tanks (ASTs) were identified in the FIPs, ERIS and aerial photographs. Ten (10) ASTs (nine (9) 4,000L and one (1) 2,500L) were located west of the building at 16 James Street. Four (4) dyked ASTs (three (3) 20,000L and one (1) 22,000L) were noted southwest of the building currently known as 0 William Street. These ASTs are PCAs creating an APEC to the study sites soil and groundwater with potential contaminants of concern being PHCs, PAHs, Metals (by ICP) and VOCs.
- **PCA-3/APEC-3: #27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles.** Various garages were noted via FIPs, and Vernons, utilizing the building at 16 James Street from 1970s-2017, some commercial names identified were: Speed Associates, Streetsville Automotive, Ontario Commercial Fuels, Dundas Cars Wholesale, Mississauga Engines, Phil Strudwick Race Cars, and Chayne Enterprises Inc. The presence of these garages represents a PCA resulting in an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals, PAHs, PHCs, and VOCs.
- **PCA-4/APEC-4: #30 Importation of Fill Material of Unknown Quality.** The previous Phase One and Two ESAs identified fill material throughout the parking lot of 2 William Street and 16 James Street. The presence of Fill material of unknown quality represents a PCA that creates an APEC to the soil with potential contaminants of concern being Metals (by ICP), PAHs, PHCs, and Benzene, Toluene, Ethylbenzene, Xylene (BTEX).
- **PCA-5/APEC-5: #28 Gasoline and Associated Products Storage in Fixed Tanks.** The previous Phase One ESA conducted by Bruce Brown Associates noted one (1) 900L empty AST historically used for heating oil in the basement of 6 Queen Street South. This AST

represents a PCA that creates an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, PHCs, and BTEX.

- **PCA-6/APEC-6: #30 Importation of Fill Material of Unknown Quality.** Three (3) buildings with basements were noted along Queen Street South in the previous Phase One ESA conducted by Bruce Brown Associates and all three (3) buildings were removed in 2021. The potential for the distribution of fill material within the former building footprint results in an APEC. Investigation is required to confirm that the material was originated on-site. Potential contaminants of concern include: PAHs, BTEX, Metals (by ICP) and PHCs.
- **PCA-7/APEC-7: #11 Commercial Trucking and Container Terminals** – The 1975 Vernon’s indicating that Shaw Ivan Trucking and Bus Parking in 2000s operated at 2 William Street. This Trucking operation represents a PCA that creates an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, PHCs, and BTEX.
- **PCA-8/APEC-8: Other – Parking Lot.** Salt used across the parking lot, for the purpose of de-icing during the winter months, represents a PCA. Salt can accumulate in the soil thus resulting in changes to pH, Sodium Absorption Ratio (SAR) and Electrical Conductivity (EC) levels. This on-site PCA represents an on-site APEC, however the activity was determined not to be of concern as per O. Reg. 153/04 below.

S.49.1 if an applicable site condition standard is exceeded at a property solely because of one of the following reasons, the applicable site condition standard is deemed not to be exceeded for the purpose of Part XV.1 of the Act: 1. The qualified person has determined, based on a phase one environmental site assessment or a phase two environmental site assessment, that the substance has been applied to surfaces for safety of vehicular or pedestrian traffic under conditions of snow or ice or both.

As such and according to section 49.1 O. Reg. 153/04 (as amended) above, the standards are deemed to be met.

- **PCA-9/APEC-9: #46 - Rail Yards, Tracks and Spurs** - Several railway lines were noted west adjacent of the study site. The presence of the railway tracks represents a PCA resulting in an APEC to the study site’s soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, BTEX, and PHCs.
- **PCA-10/APEC-10: #50 Soap and Detergent Manufacturing, Processing and Bulk Storage** – The ERIS and Vernons identified B&W Carwash and Maintenance at 15 James Street. A carwash represents a PCA creating an APEC to the study sites soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, VOCs, and PHCs.

- **PCA-11/APEC-11: #27 Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles** – Sid's Automotive, Truck Trailer and Car Repair, & historic Trott Transit Ltd. School bus services were noted approximately 13m southeast of the study site at 15 James Street. The presence of the garage represents a PCA resulting in an APEC to the study site's soil and groundwater with potential contaminants of concern being Metals (by ICP), PAHs, VOCs, and PHCs.
 - Nine (9) additional PCAs were noted within 250 m of the Study Site, however it is unlikely that any contaminants migrating off-site would present an on-site APEC at the study site due to the distance to the site and interpreted groundwater flow direction away from the site.

RECOMMENDATIONS

Based on the above noted findings EON therefore recommends a **Phase Two Environmental Site Assessment to determine the presence/absence of potential contaminants of concern in the soil and groundwater resulting from historic on-site USTs & ASTs, automotive garages, trucking company and fill material of unknown origin and off-site railway, garage and historic car wash.**

8.0 **AUTHOR**

EON Environmental Consulting Ltd. has conducted this Phase One Environmental Site Assessment as permitted by EON Certificate of Authorization (#90252). The following employees authored the report:

Amber Cottle - Ms. Amber Cottle, BA Environmental Science (Honours), EMA (Honours), was the Environmental Scientist for the project with experience in the environmental consulting field. Related project work includes Phase One & Phase Two Environmental Site Assessments, Designated Substances & Hazardous Material Surveys.

Nicole Metz - Ms. Nicole Metz, ETPD, ERPC, was the Project Coordinator for the project with over eight years of experience in the environmental consulting field. Some projects Mrs. Metz have worked on included: Phase One & Two Environmental Site Assessments, Site Remediation, groundwater and surface water sampling, underground or aboveground storage tank decommissioning, Designated Substance Surveys, Records of Site Condition Filing, Environmental Compliance Approvals, National Pollutant Release Inventory, and Hazardous Waste Information Network training.

Kevin Christian - Mr. Kevin Christian, M.Sc., P.Geo., a Professional Geoscientist (#0387) registered with the Association of Professional Geoscientists of Ontario, and a Qualified Person (Environmental Site Assessment & Risk Assessment) as per Ontario Regulations 153/04 and 511/09, has thirty-five years of experience in the environmental geoscience consulting industry conducting Phase One and Two ESA's, remedial planning, site remediation supervision, and Record of Site Condition (RSC) preparation.

Bruce A. Brown - Bruce A. Brown has a degree in Geology and Chemistry from Queen's University (1968) and a doctorate from Oxford University (1970). He is a Professional Engineer licensed in the Province of Ontario and a Qualified Person as recognized by MECP. Over the past 52 years, as principal of Brown Associates Limited, he had investigated and reported on soil and groundwater conditions on over 4,200 sites in the Province of Ontario and has designed and supervised many soil and groundwater remediation programs. He also holds certifications in Alternative Dispute Resolution from University of Toronto and University of Windsor.

Report

The documents (hereinafter referred to as the "Documents") to be released as part of the report (hereinafter referred to as the "Report") to be delivered to the purchaser as set out above are documents in Opta's records relating to the described property (hereinafter referred to as the "Property"). Opta makes no representations or warranties respecting the Documents whatsoever, including, without limitation, with respect to the completeness, accuracy or usefulness of the Documents, and does not represent or warrant that these are the only plans and reports prepared in association with the Property or in Opta's possession at the time of Report delivery to the purchaser. The Documents are current as of the date(s) indicated on them. Interpretation of the Documents, if any, is by inference based upon the information which is apparent and obvious on the face of the Documents only. Opta does not represent, warrant or guarantee that interpretations other than those referred to do not exist from other sources. The Report will be prepared for use by the purchaser of the services as shown above hereof only.

Disclaimer

Opta disclaims responsibility for any losses or damages of any kind whatsoever, whether consequential or other, however caused, incurred or suffered, arising directly or indirectly as a result of the services (which services include, but are not limited to, the preparation of the Report provided hereunder), including but not limited to, any losses or damages arising directly or indirectly from any breach of contract, fundamental or otherwise, from reliance on Opta Reports or from any tortious acts or omissions of Opta's agents, employees or representatives.

Entire Agreement

The parties hereto acknowledge and agree to be bound by the terms and conditions hereof. The request form constitutes the entire agreement between the parties pertaining to the subject matter hereof and supersedes all prior and contemporaneous agreements, negotiations and discussions, whether oral or written, and there are no representations or warranties, or other agreements between the parties in connection with the subject matter hereof except as specifically set forth herein. No supplement, modification, waiver, or termination of the request shall be binding, unless confirmed in writing by the parties hereto.

Governing Document

In the event of any conflicts or inconsistencies between the provisions hereof and the Reports, the rights and obligations of the parties shall be deemed to be governed by the request form, which shall be the paramount document.

Law

This agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

1.0 BASIC INFORMATION

Insured:	982178 Ontario Ltd. o/a Ontario Competition Fuels	Policy Number	982178
Date of survey (YYYY/MM/DD):	2006/10/30	CGI Loss Control Specialist:	Samuel Jayapalan
Person Contacted: Position	Mitch Manley	Telephone No.	905-858-9095
Mailing Address if Different for risk:	(unit # street # & name)	(City, Town, Village)	CGI AIS No.: 11006449 Tracking No.: 5615787
Location Surveyed:	16 James Street (unit # street # & name)	Mississauga (City, Town, Village)	Ontario (Province) L5M 1R5 (postal code)
Secondary address (If any)	(unit # street # & name)	(City, Town, Village)	(Province) (postal code)
IBC Territory Code	91	IBC Building Ind. Code: 5982	SR/MA File No.
Underwriter: Ayesa Paras	Broker: The Insurers Financial Group Inc.		

The **CGI Risk-Score** and comments contained in this report are based on conditions and practices observed during our survey and other pertinent data supplied by management personnel at the risk.

Recommendations in this report are made to point out those areas where remedial action could have the beneficial effect of making the above premises safer and thus more desirable from an underwriting standpoint.

Thank you for choosing CGI to perform this inspection. Please do not hesitate to contact us if we can be of any further assistance.

Committed to Service Excellence

CGI reports, prepared in compliance with commonly accepted risk control standards existing at the time services are rendered, are developed from an inspection of the premises and/or from data supplied by or on behalf of the Purchaser. CGI does not purport to list all hazards. While changes and modifications referred to in the reports are designed to upgrade protection and loss prevention of the premises, CGI assumes no responsibility for management and control of these activities. CGI will not be responsible to the Purchaser for any losses or damages, whether consequential or other, however caused, incurred or suffered, as a result of the services being provided.

RISK ALERT ISSUED: Yes No **IF YES, DESCRIBE** (A risk alert is a telephone notification to the Inspection requestor, of a situation which could imminently cause a serious loss. A Critical Recommendation will be issued to address the situation.)

Meaning of the CGI Risk-Score: The CGI Score is a grading of the risk inspected versus other risks in this class. Similar to the "Commercial" Fire Protection Grading system in design, there is range of 9 categories, with a grading or "score" of 1 being the most desirable. The CGI Score is based on a number of objective criteria pertaining to the risk at the time of our survey, tempered with the experienced judgement of our Loss Control Specialist. As a general guideline, the scores mean the following criteria:

1-3	Risks in this range are well maintained, with no apparent moral hazards or management problems. Undesirable features are non-existent and recommendations, if any, are desirable. Risks in this category are excellent (no deficiencies) to better than average for their class.
4-6	The maintenance of Risks in this range is considered average. Moral hazards are not apparent, but there may be possible management problems (e.g. poor housekeeping). Undesirable features noted are correctable, and recommendations will vary from desirable to important. Risks in this category are considered average for their class.
7-9	Risks in this range tend to be poorly maintained. Moral hazards and management problems (e.g. poor housekeeping and maintenance, poor attitude) are evident. Significant undesirable conditions are present and cannot or will not be corrected. Critical Recommendations may be present. Risks in this category are significantly below average for their class with little or no indication for improvement.

3.0 REMARKS

Risk is located on James Street in a commercial/residential neighbourhood of Mississauga. Insured occupies a portion of the building and the rest is occupied by the landlord. The building is old but appears to well maintained.

Insured is a retail liquid fuel dealer such 98 octane and 110 octane. There are five full serve pumps connected to nine metal storage tanks of 4000L each and one 2500L located above ground on the west side of the building. These storage tanks are bonded and grounded. Additionally on the south west side there are three 20,000L and one 22,000L dyked above ground metal tanks. The following above ground metal tanks according to insured are empty that on the west side building are one 40,000L, one 9000L, two 4000L, one 5000L and one 2000L. There is a 2.42m x 2.42m kiosk west of full serve pumps.

Fuel storage tanks that are connected to the pumps are not dyked and not protected from vehicle impact. (Rec.made).

Please note: Due to the nature of the recommendation the completion time mentioned in recommendation is April 2007 and may be changed by the insurer if needed.

4.0 RECOMMENDATIONS: - *** See Separate Page - Attached

OTHER COMMENTS:

Date: 2006/10/30

982178 Ontario Ltd. O/A Ontario Competition Fuels
16 James Street Mississauga ON L5M 1R5

Policy:

Location Surveyed: 16 James Street Mississauga ON L5M 1R5

Dear Mitch Manley,

Thank you for the opportunity to conduct a Loss Prevention analysis of your premises. This has enabled us to make specific risk improvement recommendations. We were unable to discuss these recommendations with you at the time of our visit. Please contact the undersigned if you require further information.

Completion of the following "Essential" recommendations is considered necessary to prevent serious property loss or personal injury. These should be addressed by the due date preceding each recommendation.

Completion of "Essential" recommendations by the due date indicated is required to insure your policy remains in full force and effect.

06 E – 1 30/April/2007: Fuel storage tanks connected to the full serve pumps and other tanks that are not dyked should be properly dyked and appropriate vehicle impact protection should provided to prevent soil contamination from leakage as a result of impact.

These recommendations do not claim to list all hazards or to indicate that other hazards do not exist.

Yours Truly,

Samuel Jayapalan
Loss Control Representative

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Note:	Substances included on NPRI reports for this NPRI ID are summarized below in the NPRI ID Substances Summary section. Substances listed in the Substances Summary are included on the basis of NPRI ID only. For entities (NPRI ID) with mobile plants and/or more than one facility location, substances listed above may or may not have been reported for specific facilities/mobile locations. The list of substances additionally includes those which have been included on the NPRI report with an unknown quantity or a quantity of 0.				
	For specific details about substance quantities, years, release/transfer/disposal methods, the reader is referred the facility report:				
	https://pollution-waste.canada.ca/national-release-inventory/?fromYear=1993&toYear=2022&name=634

Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory:

Provincial

[AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial

[AGR](#)

The Ontario Ministry of Northern Development, Mines, Natural Resources and Forestry (ONDMNRF) maintains this database of pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Oct 2022

Abandoned Mine Information System:

Provincial

[AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Mar 2022

Anderson's Waste Disposal Sites:

Private

[ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Provincial

[AST](#)

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

Private

[AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Feb 28, 2022

Borehole:

Provincial

[BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval:

Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities:

Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2021

Commercial Fuel Oil Tanks:

Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Chemical Manufacturers and Distributors:

Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register:

Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Feb 28, 2023

Compressed Natural Gas Stations:

Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -May 2023

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Jun 2023

Certificates of Property Use:

Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994 - Jul 31, 2023

Drill Hole Database:

Provincial [DRL](#)

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Oct 2022

Delisted Fuel Tanks:

Provincial [DTNK](#)

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Feb 28, 2022

Environmental Activity and Sector Registry:

Provincial [EASR](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011- Jul 31, 2023

Environmental Registry:

Provincial [EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994 - Jul 31, 2023

Environmental Compliance Approval:

Provincial [ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011- Jul 31, 2023

Environmental Effects Monitoring:

Federal [EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private [EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Jun 30, 2023

Environmental Issues Inventory System:

Federal [EIIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial **EMHE**

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Apr 30, 2022

Environmental Penalty Annual Report:

Provincial **EPAR**

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land / water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2022

List of Expired Fuels Safety Facilities:

Provincial **EXP**

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Federal Convictions:

Federal **FCON**

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal **FCS**

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Jun 2023

Fisheries & Oceans Fuel Tanks:

Federal **FOFT**

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Federal **FRST**

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank:

Provincial **FST**

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Fuel Storage Tank - Historic:

Provincial

[FSTH](#)

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

[GEN](#)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Oct 31, 2022

Greenhouse Gas Emissions from Large Facilities:

Federal

[GHG](#)

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2019

TSSA Historic Incidents:

Provincial

[HINC](#)

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

[IAFT](#)

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks:

Provincial

[INC](#)

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing is a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Landfill Inventory Management Ontario:

Provincial

[LIMO](#)

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Mar 21, 2022

Canadian Mine Locations:

Private

[MINE](#)

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences:

Provincial

[MNR](#)

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2023

National Analysis of Trends in Emergencies System (NATES):

Federal

[NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:

Provincial

[NCPL](#)

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2021

National Defense & Canadian Forces Fuel Tanks:

Federal

[NDFT](#)

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal

[NDSP](#)

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Oct 2022

National Defence & Canadian Forces Waste Disposal Sites:

Federal

[NDWD](#)

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal

[NEBI](#)

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Jun 30, 2021

National Energy Board Wells:

Federal

[NEBP](#)

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

[NEES](#)

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Federal

[NPCB](#)

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory 1993-2020:

Federal

[NPR2](#)

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of pollutant releases (to air, water and land), disposals, and transfers for recycling. The inventory, managed by Environment and Climate Change Canada, tracks over 300 substances. Under the authority of the Canadian Environmental Protection Act (CEPA), owners or operators of facilities that meet published reporting requirements are required to report to the NPRI.

Government Publication Date: Sep 2020

National Pollutant Release Inventory - Historic:

Federal

[NPRI](#)

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. This data holds historic records; current records are found in NPR2.

Government Publication Date: 1993-May 2017

Oil and Gas Wells:

Private

[OGWE](#)

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-May 31, 2023

Ontario Oil and Gas Wells:

Provincial

[OOGW](#)

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Aug 2021

Inventory of PCB Storage Sites:

Provincial

[OPCB](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders:

Provincial

[ORD](#)

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994 - Jul 31, 2023

Canadian Pulp and Paper:

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks:

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial

PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011- Jul 31, 2023

NPRI Reporters - PFAS Substances:

Federal

PFCH

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per- and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This listing of PFAS substance reporters includes those NPRI facilities that reported substances that are found in either: a) the Comprehensive Global Database of PFASs compiled by the Organisation for Economic Co-operation and Development (OECD), b) the US Environmental Protection Agency (US EPA) Master List of PFAS Substances, c) the US EPA list of PFAS chemicals without explicit structures, or d) the US EPA list of PFAS structures (encompassing the largest set of structures having sufficient levels of fluorination to potentially impart PFAS-type properties).

Government Publication Date: Sep 2020

Potential PFAS Handlers from NPRI:

Federal

PFHA

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per- and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This list of potential PFAS handlers includes those NPRI facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used, or released by the facility - these are facilities that potentially handle PFAS based on their industrial profile.

Government Publication Date: Sep 2020

Pipeline Incidents:

Provincial

PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing is an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2021

Private and Retail Fuel Storage Tanks:

Provincial

PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial

PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994 - Jul 31, 2023

Ontario Regulation 347 Waste Receivers Summary:

Provincial

REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-1990, 1992-2021

Record of Site Condition:

Provincial **RSC**

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Jun 2023

Retail Fuel Storage Tanks:

Private **RST**

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Feb 28, 2023

Scott's Manufacturing Directory:

Private **SCT**

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial **SPL**

List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X. The Ministry of the Environment, Conservation and Parks cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

Government Publication Date: 1988-Oct 2021; Jul 2022

Wastewater Discharger Registration Database:

Provincial **SRDS**

Facilities that report either municipal treated wastewater effluent or industrial wastewater discharges under the Effluent Monitoring and Effluent Limits (EMEL) and Municipal/Industrial Strategy for Abatement Regulations. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment keeps record of direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation, Mining, Petroleum Refining, Organic Chemicals, Inorganic Chemicals, Pulp & Paper, Metal Casting, Iron & Steel, and Quarries.

Government Publication Date: 1990-Dec 31, 2020

Anderson's Storage Tanks:

Private **TANK**

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal **TCFT**

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Apr 2023

Variations for Abandonment of Underground Storage Tanks:

Provincial **VAR**

Listing of variations granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variations in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Waste Disposal Sites - MOE CA Inventory:

Provincial

[WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011- Jul 31, 2023

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial

[WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial

[WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Mar 31 2023

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

CITY OF MISSISSAUGA

Location: 16 James Street, Mississauga, Ontario. Well ID: WRO-005646. Well Name: A.C.A.C.

Groundwater and Bedrock Criteria and Contaminant Sealing Record. Includes sections for Groundwater, Most Common Metals, Other Metals, Radon, and Sealing.

Well Recommendation Summary

Table with columns: Material, From, To. Entry: 0.05 concrete, 0.5 24' gravel.

Method of Construction and Well Use. Includes checkboxes for construction methods and well uses like Domestic, Irrigation, etc.

Construction Record - Casing. Table with columns: Material, Depth (ft), Diameter (in). Entry: 2" PVC, 0.05, 0.14.

Construction Record - Screen. Includes fields for material, depth, and diameter. Entry: 2.25 PVC, 70, 4.25.

Water Details and Hole Diameter. Includes fields for water type, depth, and hole diameter. Entry: 0.24, 2.25.

Well Contractor and Well Technician Information. Includes business name: Strata Soil Sampling Inc., address: 165 Balfour Court, Mississauga.

Results of Well Yield Testing. Table with columns: Test No., Time (min), Flow (L/min), etc. Includes data for tests 1 through 6.

Map of Well Location. Includes a large handwritten note: 'See Map MWC'.

Footer section with contact information for Strata Soil Sampling Inc., phone: 905-264-9304, and date: 20160223.

Appendix G:
Record of Interview

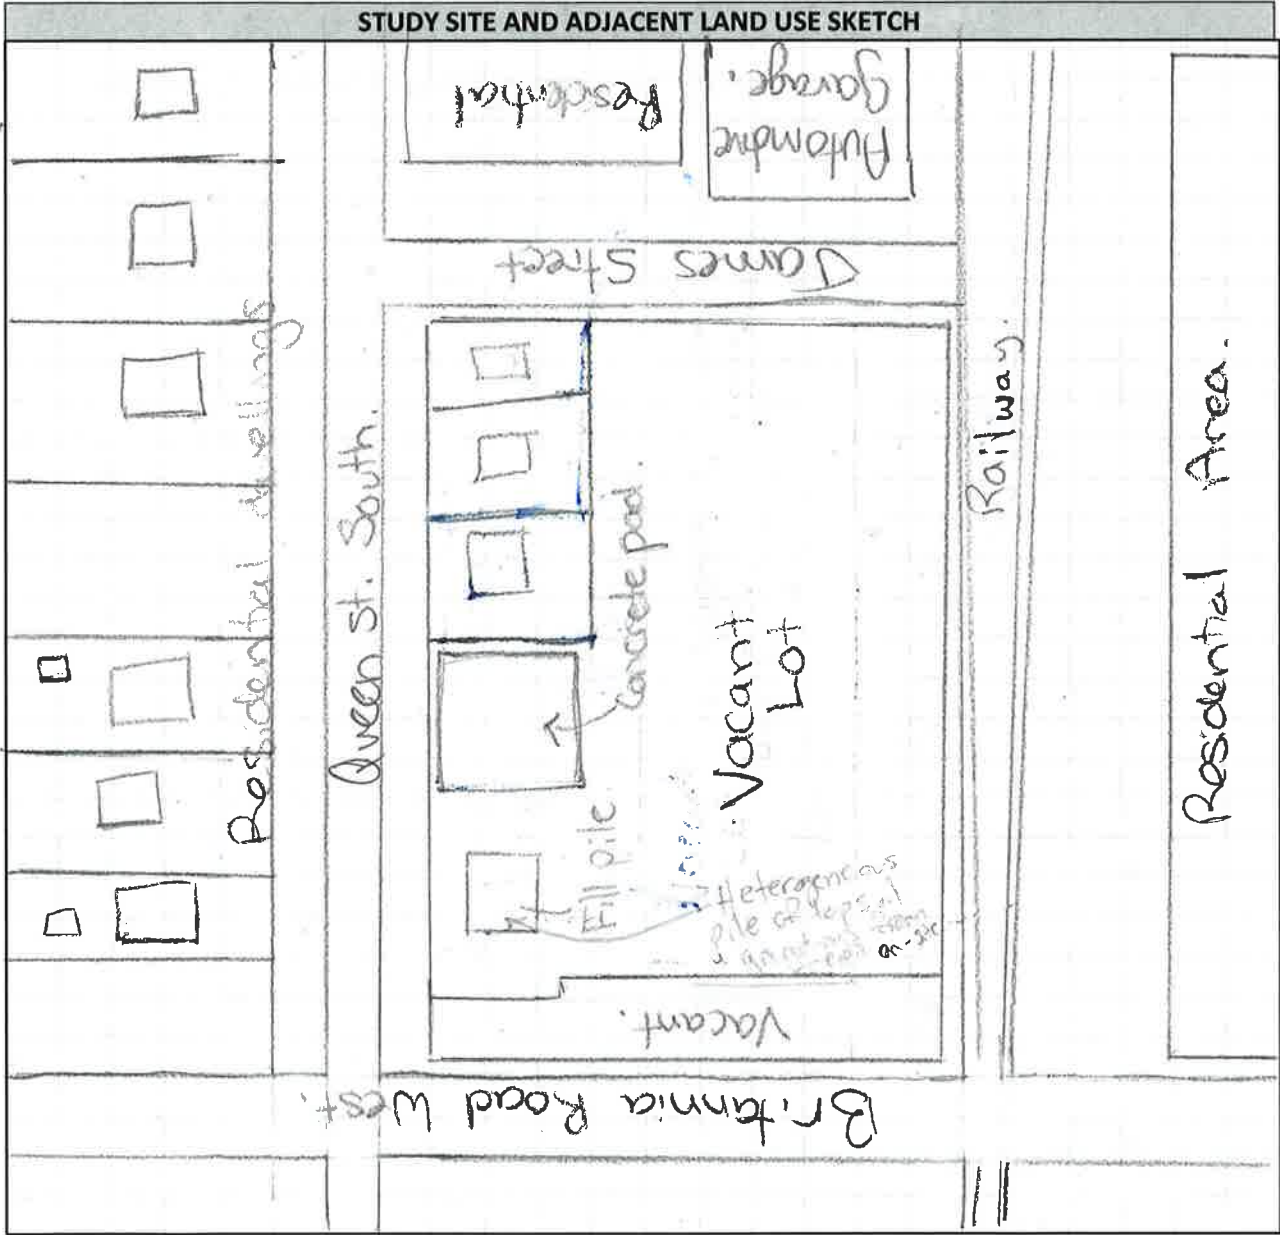

Date & Time of Interview	September 19 th , 2023, 6:00 PM	
Interviewer Name	Craig Colbourne	
Weather	15 °C, Sunny	
Site Address	6, 10, and 12 Queen Street South, 16 James Street, and 0 & 2 William Street, Mississauga, ON	
Project Number	E-23-32-1	
Interviewee Name & Position	Dino Burbello	
Interviewee Contact Information	dburbello@cityparkhomes.ca	
SITE INFORMATION		
Describe land use history. Was the property ever used for industrial use, as a dry cleaner, a garage, or bulk liquid dispensing facility (including gasoline)	16 James Street was historically used for commercial land use including a bus company and an auto garage. Other sites within the study site were historically residential land use, with single family dwellings located on the sites.	
Are you aware of any environmental issues associated with the study site such as waste disposal, landfilling, chemical use and/or storage (AST or UST)	An AST was noted within the basement of 6 Queen Street South.	
Are you aware of any site-specific permits, waste generation number, certificate of approval, ECA, water well records or sewer discharge permits	No	
Are you aware of any current or historical environmental concerns associated with adjacent properties	No	
Did you ever apply salt in the parking area?	Yes	
Are there any reports done on the property?	Yes, previous Phase One and Two ESAs were conducted on the study site.	
Is there anyone else EON could contact for additional information?	No	
EXTERIOR SITE FEATURES		
Source of clean water (Municipal)	Municipal	
Source of waste water (Municipal)	Municipal	
Surface water runoff (swale, catch basin)	Catch basins on James Street and Queen Street South	
Man-made forms of standing water	None observed	
Natural Watercourses	None observed	
Wells on site	None observed - All previously installed monitoring wells were decommissioned in 2016.	
Transformers on site	None observed	
Electrical generator on site	None observed	
Chemical storage on site	None observed	
stressed vegetation	Noted throughout the study site.	
Stained material	Throughout the commercial/industrial portion of the study site.	
Fill material	Pile of topsoil and grindings from trees on-site observed at 6 Queen Street (photo 9)	

RECORD OF INTERVIEW

Debris	None observed
EXTERIOR SITE FEATURES	
Equipment	None observed
Ground cover (Snow, grass, asphalt)	Grass, asphalt, concrete
Study site Slope	no significant slope noted
Miscellaneous	No additional observations
Historic AST	
Location of AST	Basement of 6 Queen Street South
Contents of AST	Empty former fuel tank
Material (fiberglass, steel)	steel
Year installed/removed	2020
Secondary containment	N/A
How often filled	Unknown
Staining around base	None observed
Distressed vegetation?	N/A
SURROUNDING LAND USE FEATURES	
North	Commercial
South	Commercial (Sids Automotive)
East	Residential/Commercial
West	Industrial (Railway

STUDY SITE AND ADJACENT LAND USE SKETCH

* No current on site buildings.

Appendix H:
