

Road Resurfacing Program

THIS DOCUMENT CONTAINS IMPORTANT INFORMATION - PLEASE TAKE TIME TO READ

Project Overview

The street in front of your property is scheduled for resurfacing by the City of Mississauga. Inspection shows the need for road repaving and the replacement of any damaged curbs and sidewalks. This work is part of the Council-approved Capital Works Program to renew aging City roads and sidewalks for current and future needs.

The road resurfacing program typically begins in May or June and runs until November or December. The streets can be found on the City's construction map using the link provided on the reverse.

Specific scheduling dates are not available for each street, however approximately two weeks prior to the commencement of your street, you will receive a detailed construction notice, which will provide an overview of the construction process. Work on each street takes approximately six to eight weeks to complete, weather permitting. All work is based on the contractor's schedule.

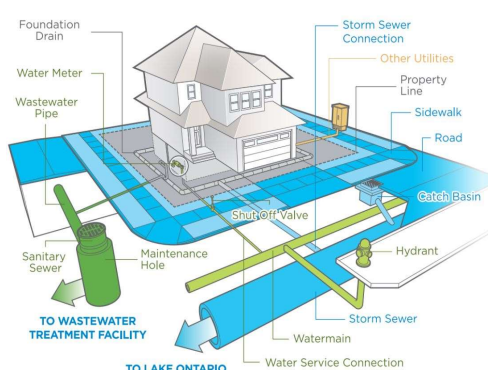

What to Expect

Work will take place in front of your property, on the boulevard, sidewalk and street. Where necessary, this work can include removing and replacing City-owned sections of driveway (asphalt, interlock only), sidewalks and grassed boulevards. The contractor does not remove concrete/pattern concrete driveways. **The City encourages property owners to delay any construction activity or renovations to the private section of driveway and/or landscape work until construction on the street is complete.**

In preparation for this year's road resurfacing program:

- Please remove all objects including, planter boxes and light fixtures located within the City's Right of Way.
- Sprinkler systems should NOT be installed on City property. **Systems already installed within the City's Right of Way may get damaged during construction.** Removing sprinkler heads prior to construction and placing flags where they are located is helpful to crews, however damage may still occur. If sprinklers located on City property are damaged during construction, please contact the Field Ambassador using the contact details below.
- **The City takes no responsibility should damage occur to heated driveways installed on City property.**
- Understand who owns what around your home. Further details are provided in the link on the reverse.

Crews will mark sidewalks and curbs requiring replacement and the locations of underground utilities, such as gas and water, so construction work does not interfere with these utilities.

Once construction work begins, there is potential for temporary disruption to cable, internet and/or telephone service, as telecommunication providers do not mark/locate their buried service lines.

In some cases, temporary overhead cables are placed to avoid service cuts during construction. The City will make every effort to minimize disruption. Once the project is complete, cables will be buried accordingly by the service provider, not the City. Should you require further information please use contact information below:

Driveway Widening – Boulevard Portion Only

If you are interested in applying for an Access Modification Permit (curb widening), information and instructions on completing the form will be provided in the detailed construction notice. Applications are subject to approval based on the Zoning By-law. A fee will be charged based on the amount of work required. No widening will take place on patterned concrete and/or lock stone driveways or streets with ditches.
