

DIY Marble Phone Case

Create and sport your custom one of a kind case!

Time to complete: 30 min.

Age Group: 10-14 yrs.

Materials:

- Clear (or light coloured) plastic phone case
- Nail polish (different colours)
- Large bowl (large enough to fit the case)
- Fill bowl with room temperature water
- Toothpick or small paint brush

Instructions:

1. Choose your first polish colour and use the nail polish brush to drip a few drops of colour onto the surface of the water (drop from an inch above the surface of the water). Once the nail polish hits the surface of the water it will start to spread
2. Continue the step above with the second and third colour. Drip the colours over top of the first colour at random, they will start to swirl around a bit - you have to do this quickly, the nail polish will dry fast!

3. Create a marble effect by using the toothpick or handle of the paint brush by swirling the polish around
4. Take your clear case and hold it so that the outside of the case is face down toward the surface of the water. Gently touch the case to the surface of the water so that the colour starts adhering to the case
5. Once the case is fully covered in the polish remove it from the water and let it dry. Once dry add a clear top coat onto the case
6. When the case is fully dry add your phone to the case

If you do not have a clear plastic phone case, try the same steps on other clear plastic items around your house!
